

Unit Testing an Apollo Server

Marques Woodson

STAFF SOFTWARE ENGINEER

@mwq27 www.marqueswoodson.com

```
const mocks = {  
  Query: () => ({  
    products: () => new MockList(5),  
    users: () => new MockList([5, 15]),  
  })  
};
```

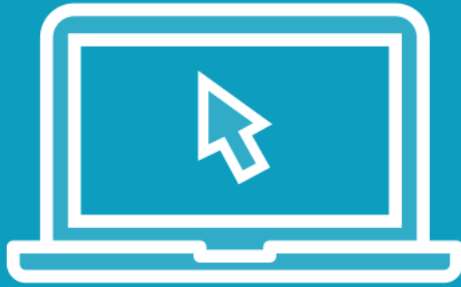

- ◀ Return 5 mocked *products*
- ◀ Return somewhere between 5 and 15 mocked *users*

```
{
  stories: [
    reviews: [
      [
        {
          lowestRating: 1,
          highestRating: 4,
          date: '2020-01-01'
        }
      ],
      [
        {
          lowestRating: 1,
          highestRating: 4,
          date: '2020-01-01'
        }
      ],
    ]
  ]
}
```

Serving mocks to the client

Components

Server

Database

Module Overview

Unit test Query resolvers

Unit test Mutation resolvers

Implement mocks in the ApolloServer

Build a schema using Introspection

Introspection

A method used to ask a GraphQL schema for information about itself, like what queries it supports.

When Would I Use Introspection?

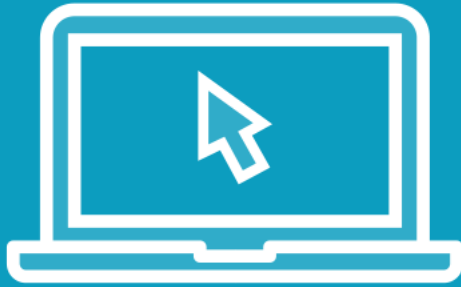

**Schema is defined
in a language
other than
Javascript**

**I don't have
access to the
schema definition
source code**

**I didn't design the
schema and need
to know what
types are available**

Demo

Write a script that uses introspection to get information about our schema
